## JACK-HAMMER

### CONCENTRATED CONCRETE REMOVER

JACK-HAMMER is a heavy duty, fast working non-fuming acid cleaner for maintaining cement and concrete trucks and equipment. JACK-HAMMER dissolves cement and loosens deposits of concrete, mortar, and other Portland products. JACK-HAMMER is excellent for cement mixers, trucks, and application tools.

JACK-HAMMER also removes light rust and helps prevent it from immediately reforming. When applied to fresh or "green" cement, JACK-HAMMER will not evaporate or dry quickly. May be allowed to stand for hours prior to removal.

Apply JACK-HAMMER (RING BACK CONCRETE REMOVER) undiluted for best results. Can be diluted up to 8:1 with water for very light film removal, such as regular exterior washes of an entire cement truck. When using JACK-HAMMER as a truck wash, it is recommended that John-Henry BRUSHLESS® be applied prior to rinsing, in order to neutralize any acidic residues that might remain. Then perform final water rinse.

### SPECIFICATIONS FOR JACK-HAMMER

Color.....	Clear, green liquid
Odor.....	Mild, acidic
pH.....	<2
Flash point.....	None
Specific Gravity.....	1.2
Foam.....	None
Biodegradable.....	Yes
Shelf life.....	One year in a sealed container.
